

# Teams Camera Permissions

As a new privacy feature, Teams will prompt after an update to grant permission to the camera.

If you answer “No” to this box, then the camera will not work in the Teams app.

When you try to enable the camera, you will see “Your camera failed” appear.

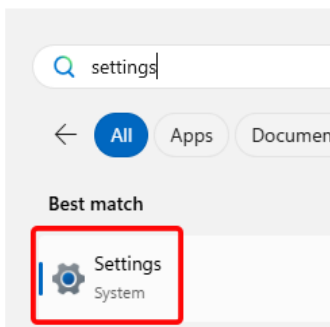

## Enable Camera

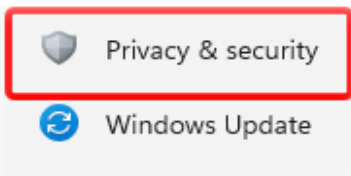

1. Open the Start menu by clicking on the Windows logo at the bottom of the screen.

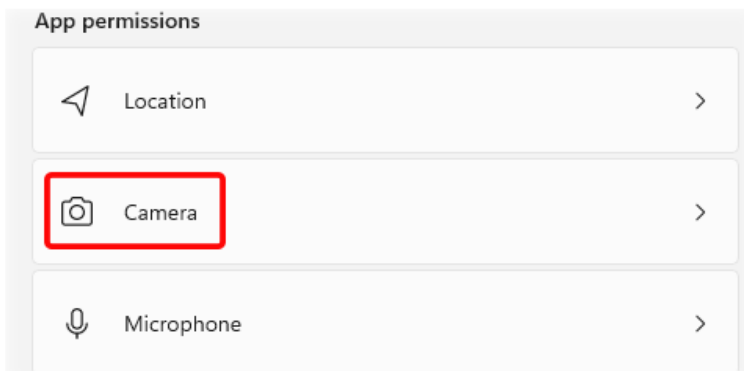

2. In the search box at the top, type in **settings**.
3. Click on **Settings**.

4. Scroll down to **Privacy & security**.

5. Scroll down again to **App permissions**. Click on **Camera**.

6. Ensure that **Let apps access your camera** is set to **On**.
7. Ensure that **Microsoft Teams** is set to **On**.
